

FRESHLY SQUEEZED...

CLOSING THE LOOP Product recycling at end of life

ISSUE 8. 10.5.2010

Creating environmentally smarter products for ease of recycling

We think there's not much point in describing products as recyclable unless you're doing all you can to make sure that's what actually happens.

With our No Green Bull project we're trying to get environmentally smarter all the time and our cool new meeting chair Cors is a pretty good example.

Cors has had a great reaction on the market place and as well as being beautiful to look at, we've made sure Cors is built to last, so it can carry on being beautiful and extremely useful, for many years to come.

The major plastic parts are made from an amazing polymer that is both super strong and 100% recyclable, so we've included a little reminder on the underside of the chair - that we're as keen to get Cors back at the end of its life as we are to sell them to you in the first place.

And who knows what your Cors might become in its second life, we're not quite sure ourselves - but we have a few years to work it out?
