project ghost

orangebox + logitech

We have pleasure in inviting you to our London Showroom for a VIP experience of Project Ghost – a unique collaboration between Orangebox and Logitech.

Our ability to engage face-to-face in a hybrid world has been restricted, forcing us to find new ways to connect. This has accelerated the need to integrate digital technology within the physical environment to form hyper-realistic experiences which simulate more natural human interaction.

Project Ghost is a carefully curated environment where people feel closer together, approximating natural real-life interaction by displaying a life-size rendering of the far end user in a camera frame. It promotes collaboration by connecting sight lines to create a natural gaze & eye contact as if you were sitting across from each other. Beautifully integrated within Orangebox's Campers & Dens, Project Ghost offers an acoustically private interaction and fully immersive experience.

Orangebox research and insight is integral to how we design and work.

Throughout **Clerkenwell Design Week** Orangebox will be presenting this latest research and hosting a panel discussion.

Jim Tylour
Head of wellbeing & ergonomics

Gillian Burgis-Smith, Architect and Inclusive Design Consultant, Co-founder of Citizens and Experience and Jim Tylour, Head of Ergonomics and Wellbeing at Orangebox, share research and discoveries which shed light on the complex, challenging and rewarding world of inclusive design. Topics include recent case studies and emerging work typologies, the power of expert lived experience workshops and the findings of an accessibility audit of a London workspace.

Luke Palmer
Principal Designer

Making sense of low carbon manufacturing

Material selection has always been a key part of product development at Orangebox. Localised supply chains have formed part of our circular ambitions for decades, now with laser focus we reconsider what 'stuff' should we really be making our products with. Wood is good, there's no doubt about that: Rapidly renewable, sequesters carbon, biophilic in nature and readily available

everywhere.... not quite!! Shifting our focus to natural resources for furniture production whilst exploiting efficient manufacturing process will enable us to dramatically reduce our environmental impacts. This is an unquestionable strategy in the shadow of climate change, we see this as an integral part of our shared responsibility as we target our net zero commitments. We need to strengthen our relationship with materials. The time is now.

Join us for an insightful debate. Hosted by Katie Triggiden, complimented with panel of industry experts, as we attempt to unpack the challenges we face trying to deliver UK manufactured product made from home grown hardwoods.

Tuesday 21st May

12:00pm Orangebox Head of Ergonomics and Wellbeing, Jim Tylour presents 'Co-ability' Stories and lessons from the front line of Inclusive Design,.

Wednesday 22nd May

12:00pm **Panel Discussion**
Ercol & Orangebox - A Timely Collaboration
Homegrown Hardwood Supply for the UK Furniture Industry.

4:00pm Orangebox Head of Ergonomics and Wellbeing, Jim Tylour presents 'Co-ability' Stories and lessons from the front line of Inclusive Design.

Thursday 23rd May

12:00pm Orangebox Head of Ergonomics and Wellbeing, Jim Tylour presents 'Co-ability' Stories and lessons from the front line of Inclusive Design.

2:00pm Orangebox Head of Ergonomics and Wellbeing, Jim Tylour presents 'Co-ability' Stories and lessons from the front line of Inclusive Design.
